Lentells
Chartered Certified Accountants

Chartered Accountants upgrade Network and Server Platform.

Background

Lentells is a Chartered Certified Accountancy business and has been operating since 1928, with three offices in Somerset and Devon. They now benefit from a comprehensive network and server platform upgrade, implemented and fully supported by Eloquent Technologies.

With an ageing infrastructure which would soon begin to impact day-to-day business operations, Lentells required a **Managed Service Provider** who fully understood their IT requirements and who had the experience and skills to know best on how to optimise their network and server infrastructure. They needed an IT partner who took a more holistic, consultative approach with their IT solutions, providing full support services, and reducing operational risk with a cost-effective Disaster Recovery solution.

After consultation, a **hybrid approach** was chosen, pushing some applications to Eloquent's eCloud platform and keeping other elements on-premises. **Disaster Recovery** was implemented using Zerto for real-time replication of the server infrastructure, delivering piece of mind and resilience for mission critical applications.
